Bonney Lake, WA • 509-969-4109 • justin.ramirez.dev@gmail.com • [LinkedIn-Justin](#) • [GitHub-Justin](#) • [ePortfolio](#) • [SNHU Merit Page](#)

Applied AI / Software Engineer

Skilled in Python, machine learning fundamentals, and building practical AI-driven applications. Experienced with reinforcement learning, model evaluation, data preprocessing, and developing prototypes using modern Python ML libraries. Strong foundation in algorithms, secure coding, backend development, and integrating features into production-ready systems. Familiar with LLMs, APIs, vector-style data workflows, and cloud fundamentals (AWS). Demonstrated ability to analyze datasets, experiment with models, document processes, and collaborate with engineering teams to build real-world AI solutions.

TECHNICAL SKILLS

- **Languages & Scripting:** Java, Python, C++, JavaScript
- **Software Development:** OOP, Agile/Scrum, REST APIs, Version Control (Git), Unit Testing
- **Web Development:** HTML5, CSS3, React, Express.js, Node.js
- **Database Management:** SQL, MySQL, NoSQL (MongoDB)
- **Cloud & DevOps:** AWS Cloud Fundamental, CI/CD basics
- **Other Skills:** Data Structures, Algorithms, Operating Systems

EDUCATION

BS – Computer Science, Southern New Hampshire University

Graduated

- GPA: 3.6, **Coursework:** Secure Coding, Full Stack Development, Mobile Architecture, Client/Server.

AS – Computer Science, Southern New Hampshire University

Graduated

- **Coursework:** Data Structures & Algorithms, Systems Analysis, SDLC, Software Testing, Automation QA.
- **19 total academic honors** including 3× **President's List** and 16× **Honor Roll**. Verified through [SNHU Merit Page](#)

PROJECT EXPERIENCE

Maze Intelligence Agent – Python (Reinforcement Learning), Tech: Python, NumPy, Jupyter, Neural Networks, RL

- Built a pirate-themed deep Q-learning agent that learns to navigate a maze and reach treasure.
- Implemented Q-training loop with ϵ -greedy exploration, experience replay, and batch updates.
- Tuned hyperparameters and added performance-based early stopping.
- Integrated with provided environment and neural network modules. Impact: Demonstrated practical reinforcement learning, Q-value estimation, and iterative model improvement.

SecureVault – Python, SQLite, AES Encryption, Tech: Python, SQLite, AES, Tkinter

- Developed a secure, multi-user password manager with encrypted credential storage.
- Implemented AES-encrypted vaults, salted authentication, and structured SQLite storage.
- Built a strong password generator and modular Python architecture.
- Designed a simple UI for account creation, login, and credential retrieval. Impact: Reinforced secure coding, encryption workflows, and scalable application design.

Course Manager – C++, Tech: C++, STL, File I/O

- Created a command-line tool to manage and search university course data.
- Added alphabetical sorting, case-insensitive search, and robust input validation.
- Used modular design with helper functions and header files. Impact: Strengthened data structure fluency and backend logic simulation.

PROFESSIONAL EXPERIENCE

Warehouse Worker, Express Employment, Spokane, WA

2023–2024

- Streamlined inventory workflows, improving accuracy and significantly reducing fulfillment errors.
- Ensured precise documentation and consistent system operation, contributing to a strong safety record with zero incidents.
- Partnered cross-functionally with operations and production teams to meet deadlines and sustain production targets.

Fabricator, Pexco Aerospace, Union Gap, WA

2017–2019

- Assembled components to exact engineering specifications while maintaining high quality and consistency standards.
- Conducted and documented inspections, providing reliable support to engineering teams and ensuring compliance with requirements.

Machine Operator, Keyes Fiber Corporation, Wenatchee, WA

2016–2017

- Operated and monitored production machinery, quickly troubleshooting issues to minimize downtime and keep operations running smoothly.
- Performed routine quality checks and maintained detailed logs to support consistency, traceability, and compliance standards.
